Projects

TAF House Material

Nov 2018 - Feb 2019 (3 months)

Company: Onebyte LLC.

<http://3.17.44.120:4000>

Tools: Angular 7, NodeJS/ExpressJS/krakenJS, MySQL/Sequelize ORM, Git (Bitbucket), Webpack and Bootstrap/HTML5/CSS3 (Sass)

Boutique of materials for wall and floor as wood flooring, gres tile, mosaic, carpet flooring and bathroom design like sanitaryware, mixers, furniture.

A platform where house material collections of tiles and woods are displayed and materials related to them. There are three types of users i.e Contractor, Designer and Basic User. Both Contractor and Designer have profiles. A contractor can order some materials' sample by placing a sample request.

I have worked on this product as a Full Stack Developer

- Develop new user-facing features in Angular 7.
- Develop (REST API's) web application server-side logic in NodeJS/KrakenJS/Express/MySQL.
- Develop lightweight, cross-browser, single page app that talks to REST API.
- Translation of the UI/UX design wire frames to actual code that will produce visual elements of the application.
- Configure, manage and deploy server on AWS using PM2
- Configure and integrated S3 for Image and Documents storage

KUKS - RESTAURANT DISCOUNTS & RESERVATION

Aug 2018 - Nov 2018 (3 months)

Company: Onebyte LLC.

<http://142.93.23.193:4000/>

Tools: Angular 5, NodeJS/ExpressJS/krakenJS, MySQL/Sequelize ORM and MongoDB/Mongoose ODM, Git (Bitbucket), Webpack, Firebase and Bootstrap/HTML5/CSS3(Sass)

Building a reservation and food delivery platform for restaurants and foodies.

With Kuks App, users can discover new restaurants, reserve tables, order dine-in & takeaway instantly – anytime, anywhere.

Responsibilities:

I worked on this product as a Full Stack Developer

- Develop new user-facing features in Angular 5.
- Develop (REST API's) web application server-side logic in NodeJS/KrakenJS/Express/MySQL.
- Develop lightweight, cross-browser, single page app that talks to REST API.
- Translation of the UI/UX design wire frames to actual code that will produce visual elements of the application.

Technologies:

- Angular 5.
- NodeJS/ExpressJS/krakenJS.
- MySQL/Sequelize ORM and MongoDB/Mongoose ODM.

- Git (Bitbucket), Webpack, Firebase.
- Bootstrap/HTML5/CSS3 (Sass).

Gharpar

Apr 2018 - Jul 2018 (3 months)
